How to Perform a Network Installation of the Contents of the Office XP Media Content CD

You can learn more about this issue by consulting the Microsoft Help and Support article:
http://support.microsoft.com/kb/897754

A small amount of sample clip art images was included with Office 2003 and Office 2007 and is part of the "local collection" that is searched when you do not have Internet access to the Microsoft Office Online Clip Art and Media Web site. Newer versions of Office software no longer includes a media content CD with additional clip art. However, the **Microsoft Office XP Media Content CD** can still be installed locally or on a network share.

You can use a network share for all Office 2003 and Office 2007 installations on client computers. The Office XP Media Content CD contains approximately 35,000 clips that are a subset of the clips that are available on the Microsoft Office Online Clip Art and Media Web site. The Office XP Media Content CD was included with Microsoft Office XP Professional, Microsoft Office XP Standard, and Microsoft Publisher 2002 Deluxe Edition.

To install the contents of the Office XP Media Content CD on a network share, you must copy the contents of the Office XP Media Content CD to the network share. After the contents have been copied to the network share, on each client computer that you want to use to access the content, follow these steps:

1. Exit all programs that are running.
2. Click **Start**, click **Run**, type the following command, and then click **OK**:
   msiexec.exe /i \\Network server\share\CAG.MSI ADDSOURCE=ALL /qb

This command causes the content to remain on the network share. The content can be accessed from the UNC location \\Network server\share. However, if you want to copy the content to the client computer, change the "ADDSOURCE=ALL" command-line parameter to "ADDLOCAL=ALL."
